PHYSICAL DESCRIPTION

0 - 4.97m (50')  
 Entire core consist of horizontal laminations of clay, silt and an occasional thin lens of SAND. The clay and silt are grey to dark grey in color and the sand is tan. There is no deformation present and bed thickness ranges from 0.2 - 4.0 cm. The core is capped off with shell fragments 0.2 - 0.3cm in size and a light shell lag is present at 20cm. Organics are found in trace amounts at 360-365cm. Bioturbation was not found.

0 - 16.30 (50')
