

Cumberland Island National Seashore, Georgia

Dune and surge elevations

Note: Dune elevations (D_{high}) were measured from a lidar topographic survey collected on January 16, 17 and 18, 2006. Surge values along the open coast (R_{low}) were extracted from the NOAA SLOSH model and represent the maximum of the maximum.

For additional information, see Stockdon, et al., 2007. Vulnerability of National Park Service Beaches to Inundation during a Direct Hurricane Landfall: Cumberland Island National Seashore, USGS Open File Report 2007-1387.
